Does your child have **attention problems** or has he/she been diagnosed with **ADHD**?

The Children’s Learning Clinic (CLC) in the UVa Human Services Department is looking for **boys and girls ages 8-12** to participate in a research study. We are currently accepting children suspected of/diagnosed with ADHD. Children without attention problems are also eligible to participate.

In exchange for your child’s participation, we will provide parents with a **comprehensive evaluation** that includes standardized intelligence (IQ) and academic achievement testing, a comprehensive assessment of your child’s short-term memory, working memory, visual problem solving abilities, vigilance, and objective measurement of activity level.

All parents receive a comprehensive report detailing the results of the assessment, and specific recommendations relevant to optimizing learning and memory in their children.

A telephone interview (~10 minutes) asks questions about your child’s behavior to determine initial project eligibility. Standardized parent and teacher questionnaires are sent subsequently to parents in stamped envelopes.

Participation in the project requires attendance for 2-4 sessions to complete historical and developmental interviews (parent) and standardized testing (child), as well as two, 3-hour visits scheduled one-week apart to assess memory and other cognitive abilities. Children play games during multiple breaks and receive a prize for their participation each week.

For more information about the project please contact the CLC: **(434) 924-7034** or Dr. Michael Kofler, CLC Director, at [kofler@virginia.edu](mailto:kofler@virginia.edu)
